Final versions due by:	<i>31- July- 2020</i>
Description	
<p>Organisations and entire societies benefit from applying innovative sustainable solutions including new marketing methods, organisational methods, products (goods or services) and processes. Such sustainable solutions contribute to the growth of organisations, attract interest in academia, support policymaking and are urgently sought by investors. Once matured they are transferred from innovators to the practice which requires the creation of effective and mutually beneficial transfer channels. The channels such as incubators, innovation focused conferences or change management centres will be effective only if they match the needs of innovators (seeking revenues from commercialisation) and the needs of commercial organisations (seeking competitiveness and profits). Once properly exploited the sustainable solutions begin to generate increased revenues and hence benefit the organisations and the entire society leading to societal development and economic growth achieved sustainably with minimum negative impacts.</p> <p>The objective of this Special Issue “Sustainable Solutions - Entrepreneurship, Management, Societal Development and Economic Growth” is to address challenges, disseminate and facilitate exploitation of sustainable solutions, thus strengthening the competitiveness of sustainable organisations and societal development. The Special Issue will attract attention of researchers, innovators, entrepreneurs, managers, NGOs, associations and policymakers and will help them keep abreast of new developments and to apply the most effective solutions. The Special Issue seeks research reports describing sustainable solutions or in any other way related to them. Also review papers that systematically evaluate advances in the underlying area are also welcome. Submissions from all internationally leading authors as well as from participants at the “Sustainable Solutions for Growth” (SGG) conference are both warmly invited.</p>
